
Policy:

Ensure that hazardous products are contained and controlled according to prevailing standards and guidelines.

Prevailing Codes and Standards:

TJC EC .02.02.01

Procedure:

I. HAZARDOUS WASTE IDENTIFICATION

- A. All known sources of PCB's have been removed from this campus. Notify your supervisor of any material thought to contain PCB's.
- B. Engine oils, gasoline, diesel fuel, and transmission oils are petroleum products and subject to strict dumping controls.
- C. Asbestos (ACM) is used in pipe insulation, spray on insulation, high temperature gasket material, sheet insulation (transite), and electrical panel insulation. ACM is subject to strict exposure, maintenance and disposal requirements.
- D. Paint, oil and lead based paints, turpentine, thinner and mineral spirits are ignitable and have chemical properties that require specific disposal requirements.
- E. Most cleaning solvents are petroleum based, ignitable, toxic or corrosive and subject to control.
- F. Corrosives and all chemicals having an excessive positive or negative PH value, such as acids, alkali and phosphates, must not be dumped into any drain.
- G. Commercial herbicides and pesticides (poisons) are used throughout the facility. Some may contain heavy metals such as lead, mercury, arsenic. Some may contain poisons such as DDT and cyanides which places strict limits on dumping and disposal.

II. CONTAINMENT OF HAZARDOUS WASTES

- A. Petroleum waste products must be stored in leak proof drums. The drum must contain special labeling which identifies its contents.
- B. Asbestos is a hazardous product that must be continually monitored to establish friability.
 - 1. Do not penetrate any wall, pipe chase or vertical enclosure without first consulting Engineering and reviewing the asbestos location drawings.
 - 2. Do not attempt to remove or disturb any asbestos materials.
 - 3. Contact the Safety Office for guidance on asbestos removal and containment.

- C. Paint & mineral spirit waste products are to be placed into separate containers and labeled to indicate their specific contents.
- D. Cleaning solvents must be stored in metal containers and labeled to identify their contents.
- E. Corrosives must be stored in appropriate containers that will not react with the chemical and must contain a label clearly indicating the contents of the chemical.
- F. Toxins and commercial poisons must be separated into categories and not mixed in common containers. Consult the Safety Officer for specific grouping instructions and appropriate container requirement.
- G. Refrigerant oil cannot be mixed with other petroleum products.

III. DISPOSAL OF DRUMS

Empty drums that are non-returnable and have been used for containing Hazardous Materials may be destroyed by first flushing the drums with clean, potable water at least three (3) times. Several holes should be punched in the top and bottom sections so they may not again be used for liquids. Plastic drums may then be disposed of in a landfill. Metal containers cannot be placed with any waste that goes to the City Landfill

IV. DISPOSAL AND NOTIFICATION OF HAZARDOUS WASTE

- A. Disposal of hazardous waste is a function of the Safety Office. Contact them prior to any disposal of or upon discovery of evidence of an unauthorized disposal.
- B. Safety Office must immediately be notified of any hazardous condition. In the event of a spill, contamination or potential contamination from hazardous materials, the area will be evacuated and sealed. Safety will assess and implement the appropriate action consistent with EPA, OSHA and DEQ regulations.

V. HAZARDOUS MATERIALS INVENTORY

- A. An inventory and MSDS of materials used or located in the Physical Plant Department will be audited annually by the Safety Officer.
- C. The inventory shall be maintained in the departmental Policy/Procedure Manual.
- D. A master set of MSDS are maintained by Physical Plant Maintenance Superintendent 1 (supervisor of mechanical maintenance) and the Safety Office. Physical Plant Shop Foremen maintain copies of MSDS relative to their trade.
- E. Any new hazardous materials brought into the work area shall be added to the inventory list and MSDS added to

files.

F. Each container must have the appropriate hazard warning label attached to it.

PHYSICAL PLANT
HAZARDOUS MATERIALS INVENTORY

Code Number	Trade Name	Manufacture Name
	204 Sulfuric Acid Neutralizing Solution	Master Company
797A	797A Insecticide	State Chemical Manf.
A5508	Battery 18 V Cadnica	Sanyo
5w132	Pressure Wash Chemical Powder	Hotsy Corp.
	Wagner Brake Fluid	Wagner Division
99-0109	100 PPM Carbon Monoxide in Air	Bacharach
	129 Nitrite Indicator Solution	Master Company
	143 Hardness Indicator Buffer Solution	Master Company
	145 Hardness Titrating Solution	Master Company
2301	15003 to 15573 Color Coat	Sem Products INC.
	15003 to 15573 Color Coat	Sem Products
